

ASHLEY WIJESUNDERA

0418 774 346 | Perth, Western Australia | Open to relocation to Canada (yes, aware it's cold as fuck)

PROFESSIONAL SUMMARY

Auto Electrician who has crawled through more underground tunnels than your average Australian battler and pulled more diagnosing miracles out of heavy mobile equipment than should be legally allowed. Spent the last few years keeping production alive in the Philippines — because apparently saving mining operations overseas wasn't exciting enough, now he wants to freeze his bits off in Canada. Trained in the full stack: fault finding, rewiring, breakdown response, scheduled maintenance, and convincing stubborn heavy machinery to actually do what it's supposed to do. If it has a battery and is breaking down, Ash has probably already figured out why and fixed it before anyone else found their torch.

TECHNICAL SKILLS

- Electrical diagnostics and fault finding on heavy mobile equipment — can hear a dodgy relay from three bays away
- Automine and RCT system exposure and support — because apparently running trains underground wasn't complicated enough
- Electrical component change-outs — starters, alternators, sensors, control systems, you name it
- Harness fault identification, repair, and installation — finds faults faster than you find excuses not to call him
- Pre-delivery inspections and commissioning support — won't sign it off unless it's genuinely right
- Remote field service and independent work capability — doesn't need a supervisor breathing down his neck to get shit done
- Underground and surface mining maintenance — whether it's 50°C underground or raining sideways on surface, the work gets done
- Breakdown response and recovery under operational pressure — "*minimal downtime*" is his middle name
- Full machine rewires and custom harness manufacturing — makes wiring looms look like artwork
- Preventative and corrective maintenance execution — actually reads the maintenance schedule
- Reading and interpreting schematics and wiring diagrams — considers this a leisure activity
- Strong safety focus — because dying is bad for your career

PROFESSIONAL EXPERIENCE

Auto Electrician | PMM · Didipio Mine, Philippines

Nov 2025 – Present

- Diagnoses and fixes electrical faults on underground and surface mobile equipment — keeps the wheels of Philippine mining turning through sheer competence
- Supports and maintains automine and RCT systems in a live underground environment — knows these systems better than the engineers who designed them
- Executes breakdown repairs to restore equipment to service with minimal downtime — operations managers love him, operators love him more
- Carries out scheduled and unscheduled electrical maintenance across the entire fleet — the kind of bloke who actually documents everything properly
- Identifies recurring faults and applies corrective actions to improve fleet reliability — treats the root cause, not just the symptom
- Works across UG and surface environments under strict site safety protocols — PPE on, brain engaged
- Liaises with supervisors and planners to prioritise work based on operational needs — good at the politics without being a politician
- Maintains accurate job records and communicates defects clearly — unlike most tradies, his paperwork is actually readable

- Completed full machine rewires during rebuilds and refurbishments — turns a mechanical corpse back into a money-making machine
- Manufactured and wrapped custom wiring harnesses to suit rebuild requirements — neat, functional, and actually labelled
- Conducted fault finding on returned equipment prior to re-release to site — catches what others miss
- Performed harness repairs, replacements, and routing corrections — proper job, not a bodge
- Carried out component change-outs including alternators, starters, sensors, and control systems
- Assisted with pre-delivery inspections to ensure equipment met site readiness standards — won't let a dodgy unit leave the workshop
- Worked to workshop QA processes and build standards — took pride in doing it right

EQUIPMENT EXPERIENCE

- **CAT mobile equipment** — the bread and butter of any serious mining operation
- **Sandvik underground equipment** — knows them inside and out
- **Other OEM mining equipment as required** — learns new gear fast, doesn't need hand-holding

CERTIFICATIONS & LICENCES

- Australian Driver's Licence — legally allowed to drive to Canada (if he wanted to)
- Working at Heights, Confined Space, First Aid, and high risk tickets — happy to complete Canadian equivalents
- Willing to complete Canadian site-specific and provincial certification requirements — getting licensed in Canada is just a formality for someone who's done the real work

EDUCATION

- **Automotive Electrical Apprenticeship** completed in Australia — actual qualified auto electrician, not just someone who says they're good with wires

ADDITIONAL INFORMATION

- Available for FIFO, remote camp, and rotational work — Philippines rotation done, Canada will be a nice holiday by comparison
- Comfortable working independently in field service and site support roles — doesn't need a team around him to be effective
- Strong interest in heavy equipment, automotive electrical systems, and custom wiring — genuinely cares about quality work, not just punching the clock
- Open to relocation to Canada — prepared to embrace the snow, the maple leaves, and the significantly better coffee

WORK ELIGIBILITY & AVAILABILITY

Open to relocation to Canada and available for remote mining operations, workshop support, and field service roles on rostered rotations. Able to mobilise for camp-based work and adapt to site-specific training, medicals, and pre-employment checks as required. Has a valid passport and is not the kind of person who gets flagged at customs for having too many spare parts in his luggage.

REFERENCES

Available upon request — will include people who will actually answer the phone and say good things.
